## typst-zebraw

Zebraw is a lightweight and fast package for displaying code blocks with line numbers in typst, supporting code line highlighting. The term "**Zebraw**" is a combination of "**zebra**" and "**raw**", for the highlighted lines will be displayed in the code block like a zebra lines.

## **Example**

To show a raw block with line numbers, just import zebraw package and then follow with #show zebraw.with() .

```
1 #import "@preview/zebraw:0.1.0": *
2
3 #show: zebraw.with()
4
5 ```typ
6 hi
7 It's a raw block with line numbers.
8 ```
1 hi
2 It's a raw block with line numbers.
```

For cases where code line highlighting is needed, you should use #zebraw() function with highlight-lines parameter to specify the line numbers that need to be highlighted, as shown below:

```
1 #zebraw(
2 highlight-lines: (1, 3),
3 ```typ
4 It's me,
5 hi!
6 I'm the problem it's me.
7 ```,
8 )
1 It's me,
2 hi!
3 I'm the problem it's me.
```

Customize the highlight color by passing the highlight-color parameter to the zebraw function:

```
1 #zebraw(
2 highlight-lines: (1,),
3 highlight-color: blue.lighten(90%),
4 ```typ
5 It's me,
6 hi!
7 I'm the problem it's me.
8 ```,
9 )
```

```
1 I'm so blue!
2 -- George III
```
